PROFESSIONAL SUMMARY

Computer Engineering graduate with hands-on experience in end-to-end data analytics, including data cleaning, star-schema modeling, DAX development, and interactive Power BI dashboards. Proficient in Python and SQL, with a focus on transforming data into actionable business insights. DataCamp x Data Engineering Pilipinas Scholar.

TECHNICAL SKILLS

- **Programming & Query Languages:** Python, SQL
- **Tools & Libraries:** Power BI, Github, Power Query, DAX, Excel, Pandas, Seaborn, Matplotlib, Scikit-learn
- **Analytics Skills:** Data Modeling (Star Schema), Dashboard Development, Data Visualization, Data Cleaning, KPI Reporting, Exploratory Data Analysis (EDA), Extract Transform and Load (ETL)

PROFESSIONAL EXPERIENCE

Siemens Energy, Inc. — Internship *June 2025 – August 2025*

- Analyzed DGA datasets in Power BI and Microsoft Excel using industry-standard diagnostic methods, building dashboards that pinpointed transformer fault indicators and strengthened data-driven equipment condition assessments.
- Inspected condensers and other unit systems, documenting and reporting anomalies to the plant manager to support proactive fault prevention.

PROJECTS

E-commerce Sales Analysis Dashboard

- Built a 6-page interactive Power BI dashboard on a 50,000-row dataset, using Power Query to clean and transform the data and a star-schema model (1 fact table, 3 dimension tables) to support fast, filterable analysis across customers, products and time.
- Developed 30+ DAX measures (Total Revenue, Average Order Value, Customer Churn Rate, Active Customers, Revenue Lost) to deliver KPI reporting and data visualization across Overview, Sales, Products, Customers, Orders and Insights pages with slicers and navigation.
- Identified retention as the main driver of the 2026 revenue decline (46.9% of prior-year customers did not return, no new customers acquired) and quantified ~$282K (8% of revenue) lost to cancellations and returns, recommending win-back campaigns, renewed customer acquisition and fulfillment process fixes.

HR Data Analysis Dashboard

- Built an interactive Power BI dashboard to analyze attrition across 2,800 employees and 6 departments, using Power Query to standardize and validate the dataset and DAX measures to dynamically calculate headline KPIs (1,140 exits, 40.7% attrition rate) that update every chart and card through department slicers.
- Identified Operations as the highest-risk department at 42.9% attrition (2.2 percentage points above the 40.7% company average), with Junior employees most likely to leave, accounting for 79 employees of its attrition.

Clinic Appointments ETL Pipeline

- Built an end-to-end ETL pipeline in Python that extracts raw clinic appointment data from CSV into a PostgreSQL staging table, transforms it with pandas, and loads an analytics-ready table, all runnable from a single-entry point.
- Cleaned and standardized 1000 messy records by parsing multiple inconsistent date formats, normalizing categorical fields (gender, follow-up flags), extracting numeric billing amounts from mixed currency formats (£, €, $, Rs), and removing duplicates and invalid values, reducing data to 950 valid records.
- Designed a modular architecture with separate extract, transform, and load modules and a staging-to-clean table layout that preserves the raw data and rebuilds the clean table on each run, so the pipeline can be re-run safely without creating duplicates.

EDUCATION

Bachelor of Science in Computer Engineering *August 2022 – June 2026*

Westmead International School

CERTIFICATIONS

DataCamp Certified SQL Associate *October 2026*
DataCamp Certified Data Analyst Associate *August 2026*
DataCamp Certified Python Data Associate *August 2026*
